PHILLIP BISHOP

Full-Stack Software Engineer | C# .NET | React & TypeScript

Danville, CA | (925) 964-5361 | phillipkbishop@gmail.com | Open to Remote/Relocation | LinkedIn | GitHub | Website

Professional Summary

Full-Stack Software Engineer with 2+ years of hands-on experience building enterprise applications using C#, ASP.NET, .NET Framework, Entity Framework Core, React, and TypeScript. Skilled in RESTful API design, SQL Server optimization, data migration, and responsive front-end development, with experience using Azure, Docker, and GitHub Actions. Delivers reliable solutions through Agile collaboration, technical discovery, and cross-functional teamwork.

Technical Skills

- **Languages**: C#, TypeScript, JavaScript, SQL, Visual Basic (VB.NET)
- **Front End**: React, Vite, Node.js, HTML5, CSS3
- **Back End**: .NET Framework, ASP.NET, Entity Framework Core (EF Core), RESTful API Design, Web API, SQL Server, SQLite
- **Cloud**: Microsoft Azure (Fundamentals), API Management
- **Testing / Deployment**: Cypress (E2E Testing), GitHub Actions (CI/CD), IIS, Agile/Scrum
- **Developer Tools**: Docker, Git, LINQPad, DBeaver, SSMS, Excalidraw, PowerShell
- **Professional Skills**: Stakeholder Management

EXPERIENCE

ELB US, Inc. **2024 - 2026**

Full-Stack Developer

Company-wide ERP Accounting Software | React, TypeScript, C#, ASP.NET, Entity Framework Core, SQL Server, Agile/Scrum

- Architected and developed an internal ERP accounting system integrating with a legacy CRM, service request platform, and project management system across the company's internal ecosystem.
- Implemented server-side pagination and optimized SQL Server query patterns in .NET RESTful APIs, reducing frontend load times for large accounting datasets by 60%.
- Engineered 50+ complex data migration scripts to synchronize financial and operational data between a legacy platform and a modern ERP system, ensuring high-fidelity translation across thousands of records and preventing reporting discrepancies.
- Developed and optimized analytical SQL queries and stored procedures in SQL Server for internal reporting, reducing report generation time by 15-20% and enabling near-real-time metrics for stakeholders.
- Led data modeling and API contract design, maintaining clean separation between React frontend and .NET backend services while supporting API management across multiple internal systems.
- Optimized UI architecture and component design in React/TypeScript to support complex financial workflows and large datasets, improving page responsiveness and overall user experience.
- Navigated and enhanced a large monolithic legacy codebase built primarily in Visual Basic and ASPX, applying modernization improvements to maintain compatibility with newer .NET frameworks and services.
- Maintained and extended functionality on an IIS-hosted platform powering core internal systems while integrating new ERP data pipelines.
- Collaborated within Agile/Scrum ceremonies alongside cross-functional and distributed engineering teams to deliver integrated solutions connecting modern ERP functionality with legacy enterprise infrastructure.
- Facilitated technical discovery sessions with stakeholders and clients, applying stakeholder management to translate business requirements into functional wireframes and system designs; mentored peer engineers on component architecture, state management, and TypeScript adoption.

EDUCATION

Chico State University **May 2024**

Bachelor of Science, Computer Science

Diablo Valley College **Jun 2022**

Associate of Science, Computer Science
